AI Tools for Work and Study

PROTOTYPE 03

ALTERNATIVE VISUAL DIRECTION

Your AI Toolkit

A more interface-like lecture deck: structured, modern, and built around task panels rather than traditional slide blocks.

SESSION 01

Tool choice

Start from the task, not the tool

EXPLORE

Map a topic, generate questions, and identify what you still need to verify.

PRODUCE

Draft, rewrite, structure, or plan something that you remain responsible for.

Prompt like you are briefing a colleague

PROMPT

`Draft a polite email to my lecturer.`

`Context: I missed today's class due to illness.`

`Goal: ask what I should review before next week.`

`Tone: concise and professional.`

WHY IT WORKS

The AI has a role, context, goal, audience, and tone.
The output is easier to judge and revise.

Build a task plan in four passes

- 1 Describe the real task in one sentence.
- 2 Ask AI for milestones, actions, and risks.
- 3 Remove vague actions and assign the next step.
- 4 Mark what needs verification or human judgement.

Private information changes the workflow

DO NOT PASTE

Names, IDs, client data, private messages, unpublished work, or sensitive university information.

USE INSTEAD

Fictional examples, anonymised structure, or a prompt that asks for a template rather than a decision.

RECAP

Keep control

Three things to keep

- 1 Choose tools by task type.
- 2 Prompt with context, audience, constraints, and format.
- 3 Verify important claims and keep the final judgement human.
