

PROTOTYPE 04

Your AI Toolkit

A tighter version of the workbench idea: smaller identity rail, more slide space, crisp teaching panels.

Start from the task

EXPLORE

Map a topic and find better questions.

DRAFT

Turn rough notes into something usable.

VERIFY

Check important claims before relying on them.

A stronger prompt gives context

WEAK

"Write me an email about missing class."

BETTER

"Draft a polite email to my lecturer explaining that I missed today's session due to illness. Ask what I should review before next week."

Prompt pattern: extract decisions

Summarise this document for a student who needs to act on it.

Return: main point, dates, decisions, actions, and claims to verify.

Turn a messy goal into an action plan

- 1 Choose one real assignment, project, or student task.
- 2 Ask AI for milestones, actions, and risks.
- 3 Mark what needs verification or human judgement.

Keep control

- 1 Choose tools by task type.
- 2 Prompt with context, audience, constraints, and format.
- 3 Verify important claims and keep judgement human.
