

RIBBON · THEMED BANNERS

Your AI Toolkit

The same ribbon design, with red introductions and chapters, dark main material, and two case-study colour options.

CHAPTER 01

Start with a task

Choose what you want to achieve before choosing an AI tool.

Start from the task

EXPLORE

Map a topic and find better questions.

DRAFT

Turn rough notes into something usable.

VERIFY

Check important claims before relying on them.

A stronger prompt gives context

WEAK

"Write me an email about missing class."

BETTER

"Draft a polite email to my lecturer explaining that I missed today's session due to illness. Ask what I should review before next week."

Prompt pattern: extract decisions

Summarise this document for a student who needs to act on it.

Return: main point, dates, decisions, actions, and claims to verify.

Turn a messy goal into an action plan

1

Choose a real assignment or student task.

2

Ask AI for milestones, actions, and risks.

3

Mark what needs verification or human judgement.

Case study: plan a study week

SITUATION

A student has two deadlines and limited study time. Their notes are scattered across a timetable and assignment briefs.

AI-ASSISTED WORKFLOW

Ask AI to draft a weekly plan from the supplied dates and available hours. Check every deadline against the briefs, then adjust the workload.

Case study: plan a study week

SITUATION

A student has two deadlines and limited study time. Their notes are scattered across a timetable and assignment briefs.

AI-ASSISTED WORKFLOW

Ask AI to draft a weekly plan from the supplied dates and available hours. Check every deadline against the briefs, then adjust the workload.

Keep control

1

Choose tools by task type.

2

Prompt with context, audience, constraints, and format.

3

Verify important claims and keep judgement human.
